STREAMWIDE

Instant Team Communication

Always be in contact with your teams, whether at the desk or on the go, Team on the run allows for instant one-to-one or one-to-many conversations.

TURN YOUR SMARTPHONE INTO THE ULTIMATE NEW GENERATION CLOUD PUSH TO TALK APP

My Business

My Business allows replacing and automating your existing paper based workflows, speed up approvals and enhances overall efficiency in your business processes. Forms and workflows can be easily created with intelligent widgets and distributed to the workforce instantly, allowing for agile and continuously improving processes.

Secured

Team on the run replaces insecure public communications tools, thereby clearly separating private from business communication and preventing data and information leakage while keeping the ease-of-use and efficiency of a messenger app.

Fleet Management

Our solution aligns perfectly in the transportation space allowing both drivers and dispatchers seamless contact with one another via PTT, channels, and geolocation tracking for drivers.

Healthcare

Our application is HIPAA Compliant, offering a secure, critical communication messaging solution. With Team on the run, at home nurses can now show proof through My Business clock-in/out widget (EVV Compliant).

Utilities

Utility companies work in some of the most strenuous environments, that's where providing a solution that doesn't crack under pressure is key. Emergency alerts, integration with LMR radios, and task management ensure that work flows stay clear and concise under any condition.

Facility Management

The demand for performance and manpower efficiencies with limited resources has been a challenge for Facility Management. With team on the run automated digital workflow, patrol route and communication collaboration capabilities enable the field teams to operate more efficiently. An efficient and reliable communication system is essential to coordinate all activities seamlessly, digital forms can be updated in real-time, the business operations process can be carried out uninterrupted on and off line. Our live operations range from property management in world cities commercial buildings, airports, to factories and warehouses.

Team on the run, Digital Transformation Unleashed

Team on the run is designed from the ground up to funnel your everyday business needs through an all in one business communication platform. Allowing you to send messages, calls, share documents, stream live video, and set your entire company up via our corporate directory and administration portal. Our software is structured to put you in the driver seat of your business and take control of the things that matter most to you.

Key Benefits:

- Processes run on a communications platform
- Protect sensitive information
- Separate private and public communications
- Directory at a glance with push updates
- Locate teams anytime anywhere
- Structure your teams for instant, efficient departmental and group communications
- Share information instantly and easily
- Keep track of all exchanges
- Ease of deployment without heavy investment
- Outstanding user experience boosting employee engagement and efficiency

Service API

With our service API, team on the run is able to integrate with 3rd party systems, the platform can be expanded to adapt to different customers operational logics and generate additional value and revenue by connecting to people, process, place and technology.

The service API allows an Internet-of-Things (IoT) platform connect to team on the run by sending alarm messages and trigger My Business workflows that enables fully automated processes and workflows based on input from an unlimited number of sensors in the field, in situations such as contamination preemption to real time leakage detection, intrusion prevention, temperature control, to name just a few.

Dispatch Management

Team on the run WebChat offers all the convenience of the mobile app on a web browser interface for users who prefer to work from laptop or desktop. The WebChat interface is also a comprehensive dispatching platform. Dispatchers can check the location of any user, or group of users, through a simple user interface; as well as monitor data such as location history, speed, or time spent idle. Using our powerful Web RTC based platform, a dispatcher can monitor multiple groups or channels of users and communicate with them via PTT, two way VoIP or instant message. Team on the run also provides the ability for dispatchers to send files or even location data - which can help team members stay on track and avoid wasting valuable time searching for information or addresses.

Flexibility for a remote workforce

Team on the run can provide an instant enterprise "Communication and Collaboration" solution with company directory, easy to set up user groups, multimedia functions and geolocation tracking. A global workforce may not be desk bound and not all staff have email (construction workers, maintenance team, service staff). Team on the run can link all your coworkers up, enable a sense of belonging to the company, increase productivity, and establish channels for the management to communicate with all staff and does not leave anyone out of the communication loop.
