

A robust and intuitive mission critical solution to streamline and simplify the work of airport professionals.

- MCPTT, MCData, MCVideo
- QoS, priority and preemption
- Digital Briefcase
- Outdoors/Indoors geolocation
- Call in/out via PABX
- Emergency communication

**Modern
communication
solution for
smart airports**

Team on mission enriches the value of the 4G/5G private networks, supporting airports staff to be better connected and work more efficiently.

Telecommunications operator **Hub One**, specialist provider of services and networks for airports, and part of the Group ADP, called on **STREAMWIDE** to develop their professional 4G/5G mobile network services at Paris-Charles de Gaulle, Paris-Orly and Paris-Le Bourget airports.

Previously, **Hub One** used an old Tetra PMR network that only allowed airport personnel to receive messages and communicate by voice via walkie-talkies.

With the roll-out of the new high-speed network, **Hub One** had to migrate all the communication services running over Tetra PMR devices. For this purpose, they chose to use our solution **team on mission** to perform the switch.

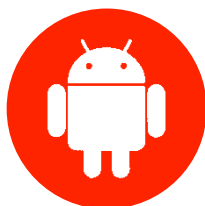

The deployed 4G/5G network along with our mission-critical platform, will enable airport personnel and providers to centralize all professional communication services in a single integrated application (voice, data and video services), allowing to share documents and multimedia files in real time.

Thereby, **Hub One** responds to the technological challenges involved in the development of the smart airport project, promoted by Groupe ADP, and which aims to smooth and optimize the passenger journey through the usage of new technologies.
