

# ROOMS

BY TEAM ON THE RUN

A secure and sovereign  
collaboration platform.

# Rooms

**A secure virtual workspace where employees can collaborate and manage projects remotely.**

## Organizations' challenges

Since the emergence of the COVID-19 pandemic, companies and governments around the world have been forced to implement remote work policies. This transition has been inevitable, and today, many companies have chosen to maintain this work model, whether through full-remote or by adopting a hybrid model. While these new work models offer multiple advantages, they also come with risks that organizations must be mindful of, particularly when choosing collaborative solutions.

### Security vulnerabilities

While numerous entities turned to mass-market applications to provide remote work tools for their employees, these pose security flaws for professional use. Companies will be exposed to serious risks such as cyberattacks, data breaches, and non-compliance. Hackers can impersonate legitimate business accounts in order to phish user credentials, steal data, and infect employees with malware.

### Data sovereignty challenges

Data protection goes beyond the choice of storage location and depends on the laws of the country where the data is stored. Extraterritorial laws such as the Cloud Act pose a risk for cloud-based applications. For example, if a company stores its data with a cloud service provider based in Spain, a subsidiary of US-based company, the United States government could access it under the Cloud Act.

### Multiple platforms to manage

Most collaboration platforms currently available in the market do not meet all the communication and collaboration needs of companies. To compensate for this lack of functionality, companies are turning to additional tools, resulting in the management of multiple platforms and making the unification of work tools and data centralization nearly impossible.

# Rooms

Your partner for a secure and sovereign collaboration!

Thanks to the sovereign collaboration solution **Rooms**, you can enhance coordination and facilitate exchanges within your organization, without compromising the security of your data. You will have complete control over your data and will only be subject to local jurisdiction. **Rooms** enables you to achieve better control over meeting access types while preserving intuitiveness and ease of use.

## Why choose the collaboration solution **Rooms** ?

The collaboration platform **Rooms** is your gateway to borderless connectivity. Whether for internal collaboration or meetings with external parties, our secure solution **Rooms** transcends distance limitations. It brings teams closer, strengthens ties with customers, and provides an immersive experience where each interaction is rich and relevant.

**Rooms** also provides a tailored response to the specific needs of your organization.

### Secure your exchanges

**Rooms** is a highly secure professional collaborative solution thanks to encrypted communications and security protocols designed to prevent vulnerabilities and protect your company's data. Furthermore, access to your internal or external meetings is carefully controlled, and all participants are properly identified.

### Protect your sensitive data

Your data sovereignty is our top priority. In the face of ever-growing extraterritorial laws, we offer a sovereign solution that allows you to maintain full control of your sensitive data. **Rooms** provides peace of mind by ensuring the confidentiality of your data, regardless of your operational location.

You have the choice between SaaS hosting or On-premise:

- **TOTR SaaS:** data is processed and stored in our data centers located:
  - In Europe (for EU and rest of the world customers).
  - In the United States (for US customers).

- **TOTR On-Premises:** data is processed and stored in your own data centers, on-site.

## Facilitate collaboration and build synergies without borders

**Rooms** empowers your teams to co-create, share ideas, and collaborate seamlessly, building a powerful synergy that goes beyond the constraints of physical distances.

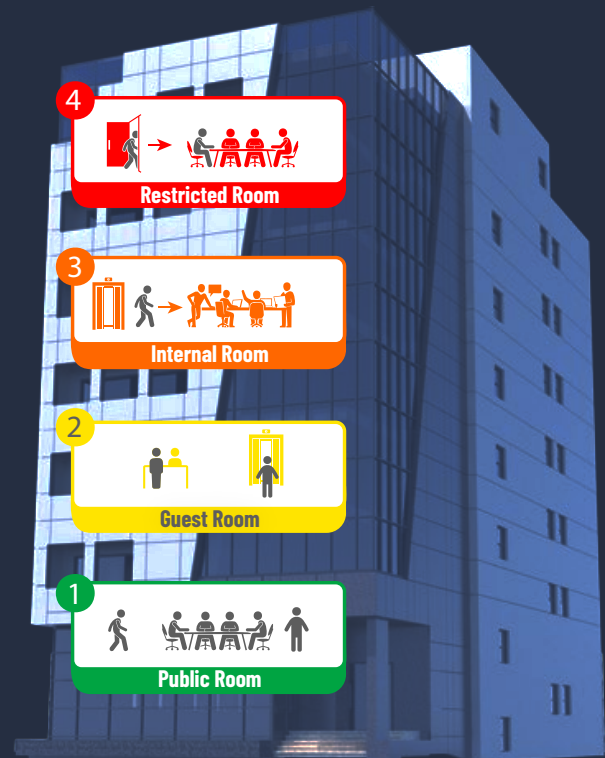

Moreover, you can enhance efficiency by replacing multiple tools with an all-in-one communication and collaboration solution. Your teams will benefit from a unified virtual space to communicate, exchange sensitive information, and making progress on projects even when working from a remote location.

## Easily create virtual Rooms tailored to your specific needs

The collaboration platform Rooms allows you to create, with just a few clicks, virtual rooms adapted to your specific needs, by choosing the appropriate access type:

- **Public Room** : By opting for this type of access, you have the opportunity to create webinars, invite a broader audience to participate in your sessions, and promote your company or solutions. You can invite customers, prospects, as well as partners. Anyone with the meeting link can join the room.
- **Guest Room** : Guest meeting rooms are only accessible to specifically identified individuals, allowing your teams to securely invite external guests. This ensures enhanced confidentiality during exchanges.
- **Internal Room** : These rooms are exclusively reserved for internal members of the organization. No external person can access them.
- **Restricted Room**: Only internal members of your organization invited to the meeting have access to the room. This type of room is designed for privileged interactions with specific collaborators. Any non-invited collaborator will not be able to access it.

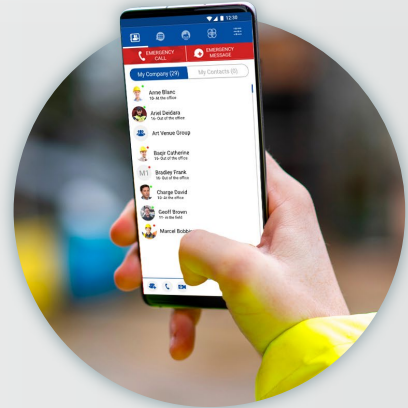

# A comprehensive all-in-one solution for better coordination!

With the collaboration solution **Rooms**, you will have the possibility to access various additional features to enhance communication and improve collaboration within your organization.

## Multimedia Messaging

Private and group chat spaces for exchanging real-time information, promoting dynamic and instant **communication** within your organization.

## A company directory

Enables your employees to easily find the right contacts within the organization.

## Advanced telephony (via PBx)\*

Centralize all your **communications**, and **save costs** by virtualizing landline phones and DECT devices in a single tool.

## Push-to-talk communication channels\*

A solution adapted to specific professions, meeting your needs for unifying and modernizing communication tools within your organization.
