

City of Paris – Use case

Strengthening field agent safety at the City of Paris with Team on the run

Context: Safeguard municipal agents against field risks

The City of Paris has committed to a proactive approach to **occupational risk prevention** to better protect its field agents. Among the most sensitive environments are **municipal cemeteries**, where agents work under potentially hazardous conditions: open cavities, uneven ground, occasional isolation. A simple incident can quickly escalate.

In compliance with regulations on the **protection of isolated workers**, the City of Paris sought a reliable, responsive, and easy-to-deploy solution to ensure the safety of its teams in these specific environments.

An all-in-one solution for agent safety

To meet this need, **the City of Paris** deployed **Team on the run (TOTR)**, a secure and mobile platform for alert management and isolated agent protection. This solution enables automatic incident detection, precise agent geolocation, and smooth coordination of emergency responses in critical situations.

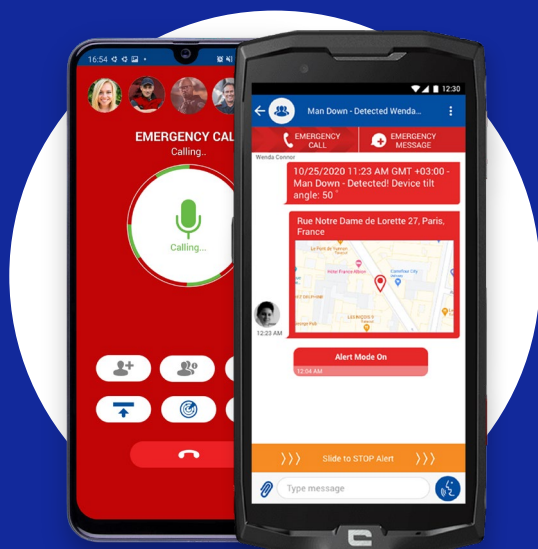

A comprehensive system to protect field or isolated agents:

- **Detect falls or fainting automatically**, using integrated sensors and verticality loss monitoring.
- **Activate manual alerts** via an emergency button to send calls and messages in case of danger.
- **Locate agents in real time** to pinpoint the exact location of those in distress.
- **Use push-to-talk (PTT) calls and ambient listening**, allowing the control center to quickly assess the situation.
- **Enable rapid and targeted interventions** by identifying the nearest agent and efficiently coordinating rescue efforts.

Observed results

- **Reduce response times** in case of incidents, with faster and localized assistance.
- **Improve coordination** between field teams and safety supervisors.
- **Ensure regulatory compliance** for the protection of isolated workers.
- **Enhance the sense of security and confidence** among municipal agents.
- **Strengthen the image of the City of Paris** as a leader in risk prevention and modernization of working conditions.

An exemplary approach to prevention and innovation

The **City of Paris** initiative perfectly illustrates how a **local government can combine regulation, innovation, and workplace well-being**. By choosing **Team on the run**, the city adopts a human-centric and technological approach to make agent safety a concrete priority, both on the ground and at a strategic level.

With Team on the run, we provide a simple, effective, and reassuring solution that enables city agents to work under better conditions while meeting regulatory requirements.
