Challenges

Home-care nurses are sent out into the field and management has a lack of insight into whether the nurse has made it to their on-site location. Nurses will go to multiple locations each day and the management relies on the nurses to provide the details via a paper form at the end of each day for administration to file. However, with the new EVV (Electronic Visit Verification) mandate, it is now required to record electronically each visit the nurses make. Before team on the run, the agency had no ability to be sure that time, location, and dates were recorded properly, and the reporting typically took hours to put together.
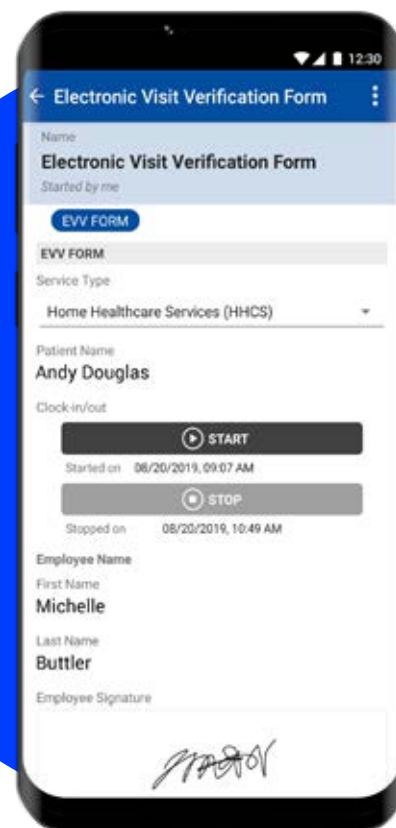

STREAMWIDE

Retaining safety while increasing efficiency

Now, with team on the run, they can instantly show proof through My Business' clock-in/out feature that the nurse was on-site and for the assigned time needed. Reports are now filed within minutes and kept organized on their desktop for instant access. Team on the run also provides emergency alert functionality, so if a nurse feels unsafe they can instantly, in one-click, reach out to their internal teams for help.
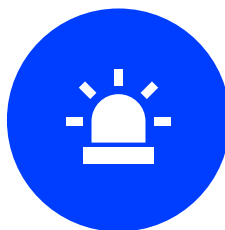

Key Features

- One-click PTT
- HIPAA Compliant
- Geolocation
- Carrier Agnostic
- eSignatures
- Easy to Deploy

EVV Mandate

Today, healthcare professionals need to keep track of how long their home visits are for compliance purposes. In order to be as precise as possible, they need to use a clock-in/out solution that can be flexible yet efficient enough to funnel this information to their managers.

Emergency Alerts

The safety of a field worker is of utmost importance for an organization. Empowering employees with an application that offers a suite of emergency functionalities can help ease the mind, knowing you are only a push of a button away from sending an alert to your organization.

Robust Reporting

The need to be able to track and clock-in/out employees is only considered great if the reports are there to back up the information. Luckily, through team on the run's My Business suite, you can pull on a daily/weekly/monthly/yearly basis in order to have all your information clear and concise to align with all healthcare protocols.
