

**ACT
AS
ONE****Challenges**

Dispatchers always need to have a streamlined form of communication with their drivers, while also maintaining an overview as an “eye in the sky” for where the drivers need to go. This can be challenging when you must go back and forth between multiple applications. At the end of the day when you must extract driving reports, well, there’s another application for that.

Unifying Drivers and Dispatchers under **one solution**

Team on the run offers Limousine services flexibility by addressing all the problems faced by offering an all-in-one solution. By using one application instead of 3, team on the run saves limo services on devices (cost), time, and efficiency - all digital - all in one place.

Key Features

- Dispatch Management
- One-click PTT
- Breadcrumb trail Reporting
- PTT Call blast
- Unlimited Channels
- Vehicle Inspection forms

PTT Cal Blast

One of the problems faced by limousine services is drivers only have 1 dispatcher to reach back to when a problem or question arises. PTT Call Blast allows drivers to PTT all available dispatchers, whomever answers first is instantly connected to the call to assist the driver with ease.

Digital Forms

With My Business, we have found a way to eliminate the clutter of paper forms that drivers must fill out for trips or vehicle inspect forms that are due at the end of the day. By digitizing these workflows we allow greater flexibility day-to-day with just a few clicks in the team on the run application, drivers can instantly send passenger or vehicle information to management seamlessly.

Carrier Agnostic

Team on the run is a fully functional software suite available on both Android and iOS and available on all carriers. This allows for flexibility between drivers and dispatchers of any type of employment, from a contractor to a part-time employee, you can keep your entire app in sync.
