

The STREAMWIDE *team on mission* solution selected by the Grand Paris Express within the ENGIE Solutions and Nokia consortium

Paris – The Grand Paris Company (SGP) has selected the consortium made up of ENGIE Solutions and Nokia to deploy a private 4G / LTE network and the associated communication services for the new automated metro lines of the “Grand Paris” Express metro.

With 200 kilometers of network, the Grand Paris Express provides for the creation of four new lines around Paris, the extension of line 14, the construction of 68 stations and the development of new districts around these future urban centers. The Grand Paris Express will be of major importance in relieving congestion on existing public transport and in transporting Ile-de-France residents on a daily basis, without passing through Paris, by opening up areas that are currently poorly served. The Grand Paris Express will be an anchor for the development of Grand Paris with 68 new stations in the network which are intended to bring out 68 new “15-minute cities of Greater Paris” to offer the inhabitants a more ecological environment and a better quality of life. High-speed connectivity services will be provided and will meet all future operational and maintenance requirements of the Grand Paris Express, as well as the emergency and security needs of its transport network.

With its innovative **team on mission** solution, STREAMWIDE satisfies all the critical communication needs of the Grand Paris company (SGP), by providing voice communications (Mission Critical Voice), data communications (Mission Critical Data), video communications (Mission Critical Video), video streaming and secure multimedia conversations, thereby allowing field teams to communicate amongst themselves and share information in real-time with central coordination or crisis management teams. The geolocation and tracking services, alert and personal protection functions are also available to help improve coordination between teams, increase performance and make these new transports a safer place for both operators and passengers.

“STREAMWIDE has the honor of participating in this major regional development project with the aim of making Paris a world-class metropolis. Deployed and integrated by our partner Nokia, our **team on mission** solution will enable the Grand Paris company to acquire a latest generation 4G PMR radio communication system. With it, the operation and maintenance teams will have resilient and modern communication and collaboration tools at their disposal. Should a major crisis develop, the solution’s interoperability with police & security forces radio systems will facilitate the coordination of all teams involved.” **Pascal Beglin – CEO**

Team on mission also offers all the tools necessary for effective management of crisis situations, allowing SGP teams to be responsive in any circumstance, access critical information in real-time, communicate in complete confidentiality via virtual command center for crisis and make appropriate decisions quickly in order to ensure that normal activities can continue.

In addition, thanks to its "API Services" interface, **team on mission** can also be integrated with SGP command posts, data exchanges, voice services and their current management of users and operator groups.

ABOUT STREAMWIDE (Euronext Growth: ALSTW)

A major player for 20 years in the critical communications market, STREAMWIDE has successfully developed its **Team on mission** (mission critical) and **Team on the run** (business critical) software solutions for administrations and businesses. These solutions for smartphones and PCs, offered in a SaaS model or on Premise, benefit from numerous functionalities such as the multimedia group discussions, VoIP, push-to-talk (MCPTT and MCx new generation 4G / 5G LTE), geolocation, digitization and automation of business processes. These innovative solutions meet the growing needs for digital transformation and real-time coordination of interventions. They allow field teams to transform individual contributions into collective successes and to act as one in the most demanding professional environments.

STREAMWIDE is also present on the Value-Added Services software market for telecom operators (visual voice messaging, billing and charging of calls in real time, interactive voice servers, applications and announcements) with more than 130 million end users all over the world.

Based in France and present in Europe, USA, Asia and Africa, STREAMWIDE is listed on Euronext Growth (Paris) – ALSTW FR0010528059.
